Aeron Jay P. Bulatao

+63 945 367 4856 | bulataoaeronjay@gmail.com | github.com/aeronjay | linkedin.com/in/bulataoaeronjay | Open to Remote

Summary

Full-Stack Software Engineer with **professional experience** across a tech lead internship (React/TypeScript, Java/Spring Boot, AWS) and paid freelance automation work (Python, Playwright, multi-site web scraping for a Canadian e-commerce client). Built 5 additional end-to-end projects spanning REST APIs, database integration, serverless architecture, and AI-powered features (LangChain, RAG). Strong academic record (3.8/4.0 GPA equivalent) at EARIST. Seeking a junior full-stack or automation engineering role to contribute immediately in a product-driven team.

Skills

Languages: JavaScript (ES6+), TypeScript, Python, Java, C, C++, C#

Frontend: React.js, Next.js 14, React Native, Expo, HTML5, CSS3, Tailwind CSS, Vite

Backend: Node.js, Express.js, FastAPI, Flask, Spring Boot, RESTful API Design

Databases: MongoDB, SQLite, Prisma ORM, FAISS (Vector DB)

AI / ML & Automation: LangChain, RAG Pipelines, HuggingFace Transformers, Prompt Engineering, NLP, Playwright, Web Scraping, Automated Workflows

Cloud & DevOps: AWS (Lambda, IAM, Cognito), Vercel, Render, Docker (basic), Git, GitHub, Linux/Bash, Postman

Practices: Agile/Scrum, MVC Architecture, RESTful API Design, Serverless Architecture, IAM & Cloud Security, Automated Workflows, Code Review

Experience

Full-Stack Developer / Tech Lead Mar 2026 – Jun 2026

FPD Asia Property Services, Inc. *Manila, Philippines (Internship)*

- Led end-to-end development of a scalable internal web application as both Technical Lead and Full-Stack Developer, coordinating feature delivery across frontend and backend using **React/TypeScript** and **Java/Spring Boot**.
- Designed and deployed **event-driven serverless functions on AWS Lambda** to automate pre-registration email workflows, eliminating manual email handling and reducing turnaround time for new user onboarding communications.
- Established secure cloud architecture by configuring **AWS IAM roles and least-privilege access policies**, governing interactions between Lambda, AWS Cognito, and the Spring Boot backend to meet enterprise security requirements.
- Implemented **AWS Cognito** for user authentication and authorization, integrating identity management directly into the Spring Boot API and enabling role-based access control across the application.

Automation & Web Scraping Engineer 2024 – 2025

Freelance — Private E-Commerce Client *Remote (Canada)*

- Delivered a paid, production-grade multi-site web scraping system in **Python/Playwright** targeting **7+ competitor and marketplace sites** (including Amazon.ca), automating a competitor price-research workflow previously requiring 5–8 hours of manual effort per weekly cycle.
- Engineered the full extraction pipeline: scheduled trigger → headless Chromium with custom user-agent and viewport spoofing for **anti-bot evasion** → dynamic DOM traversal across up to 20 paginated pages per site → structured CSV output (title, price, URL, store) delivered to client.
- Architected a **modular, site-specific scraper design** (one Python module per source) orchestrated by a master dispatcher, enabling new competitor sites to be onboarded without modifying existing scraper logic.
- Handled production-grade scraping challenges: dynamic JavaScript rendering, **4-tier selector fallback chains** per site for stale selector resilience, pagination boundary detection, and graceful degradation on empty result sets.

Engineering Projects

AmangBot | *Python, FastAPI, LangChain, React, FAISS, HuggingFace* | github.com/aeronjay/AmangBot

- Built a RAG-powered university Q&A chatbot to replace manual student inquiry handling; ingested 50+ institutional PDFs and FAQs into a FAISS vector store, enabling semantic search across the full document corpus.
- Designed a full LangChain pipeline (document chunking → Nomic Embed embeddings → FAISS indexing → Mistral LLM response) achieving sub-2-second query response time on a standard server.
- Developed a RESTful FastAPI backend with multi-turn conversation memory and a React frontend chat interface, reducing repeated queries by supporting context-aware follow-up questions.
- Automated the document ingestion pipeline to process new PDFs without code changes, cutting update time from hours to under 5 minutes per batch.

QUROFIMS | *Next.js 14, TypeScript, Prisma ORM, MongoDB, NextAuth.js* | github.com/aeronjay/QUROFIMS

- Built a full-stack QR-code-based lost-and-found platform with an automated item-matching engine that eliminates manual case-by-case comparison by scoring candidates across 4 factors (item type, keyword overlap, location proximity, date decay).
- Implemented a confidence-scoring algorithm (High/Medium/Low) that auto-triggers real-time email and in-app notifications on matches, reducing average match resolution time by an estimated ∼60% versus manual review.
- Integrated NextAuth.js for role-based access control (admin, user) and deployed on Vercel with server-side rendering via Next.js 14 App Router, achieving consistent <1s page load times.

SmartSMS-Barangay | *React, Node.js, Express.js, MongoDB, REST APIs* | github.com/aeronjay/SmartSMS-Barangay

- Built a web platform for local government units to automate bulk SMS and email broadcasts via Android SMS gateway integration, replacing manual one-by-one messaging for 200+ registered residents.
- Developed automated notification workflows with role-based triggers, scheduled announcements, and resident segmentation, reducing manual outreach effort by an estimated ∼70% for administrative staff.
- Deployed on Render using a modular MERN architecture with asynchronous request handling, supporting bulk operations without blocking the API or timing out under concurrent load.

CCS-Repo | *React, Node.js, Express.js, MongoDB* | github.com/aeronjay/ccs-repo

- Built a full-stack academic repository with automated metadata extraction, full-text search with relevance ranking, and an automated peer-review assignment workflow mapped to SDG classifications.
- Implemented submission status tracking and reviewer routing logic using Express.js and MongoDB, reducing manual review coordination across 3 faculty roles; deployed to Vercel.

MediRemind | *React Native, Expo, TypeScript, REST API* | github.com/aeronjay/MediRemind

- Built a cross-platform (iOS/Android) medication reminder app with intelligent scheduling, automated local push notifications, and adherence tracking using React Native, Expo, and TypeScript.
- Designed calendar-aware scheduling logic and secure local data storage; integrated a RESTful API for medication data, enabling users to track 100% of scheduled doses with offline support.

Education

Eulogio "Amang" Rodriguez Institute of Science and Technology (EARIST) Manila, Philippines
Bachelor of Science in Computer Science | GPA: 1.49/1.00 PH scale (≈ 3.8/4.0 US) *2026*
